The Titan Frame is the #1 Metal Frame for Billboards and is Now Available from Irvin!

All Panel-free frames are not created equal. Protect your investment with the frame engineered to withstand the harshest of environments, and used on some of the largest, most high-profile billboards in the country.

The patent-pending Titan Flex System was designed to eliminate the need for wood or metal sections. Engineered to withstand 150mph wind loads*, this structural steel unit eliminates the unsightly bent corners found in inferior designs. It comes complete, to support both the vinyl advertisement, as well as an internal backup vinyl. An interior vinyl ensures your branding is front and center when you are searching for your next advertiser.

Titan can be ordered as a retro-fit to an existing structure or as part of a new build. On smaller boards, up to 36ft wide, reduce costs and weight with Titan Lite, fabricated utilizing 2"x 2" square tubing. The standard Titan Flex - comprised of 3" x 3" square tubing - is available in all configurations and for a variety of unique applications, including wallscapes.

Cutouts and extensions? No problem. Titan's extension clip kits ensure secure mounting every time. Titan's superior design also offers adequate spacing between the advertisement and interior company branding vinyl, eliminating the risk of moisture and mold build up between the faces.

Quality structures are the backbone of a billboard business. They should be supported by solid designs and materials made to last. But not all panel-free frames are created equal and inferior products can compromise the integrity of the overall unit. Trust your boards to Titan, the powerhouse in panel-free frames.

*Depending on the spacing on the uprights. The eight foot spacing for the uprights at the 2003 code is 150mph.

The Titan Frame Main Benefits:

- Works for new builds as well as retrofits.
- Custom sizes available.
- Never replace panels again.
- Easy to install with as few as ten parts.
- Cutouts and extensions can be securely mounted with extension clip kits.
- Fits on: monopoles, beam structures, wood structures, and wall mounts.
- Structural steel design may help strengthen and align older wood pole or I-beam signs.
- Can be galvanized for coastal applications.
- No unsightly bent corners.
- Made in the USA.
